MINH NGUYEN

Software Engineer (Full Stack) | React.js, Java Spring Boot, Node.js, Kafka, PostgreSQL
(740) 915-2050 | dminhnguyen161@gmail.com | linkedin.com/in/minhnguyen161 | github.com/MinhMeoNguyen0 | minh-meo.vercel.app
Sunnyvale, CA | H-1B Visa Holder

TECHNICAL SKILLS

Languages: Java, TypeScript, JavaScript (ES6+), HTML, CSS, Python, SQL
Frontend: React.js, Redux, React hooks, Vite, Material UI, Ant Design, Responsive UI
Backend: Java Spring Boot, Spring WebFlux, JAX-RS, Node.js, Express, Hono, REST APIs, Microservices, OpenAPI/Swagger, Postman
Data & Messaging: PostgreSQL, SQL, NoSQL (Cassandra, MongoDB), Redis, Apache Kafka, Solr, Resilience4j
Cloud & DevOps: AWS (EC2, S3), Azure (Blob Storage, Queue), Google Cloud Run, Docker, Kubernetes, CI/CD (GitHub Actions, Looper), Maven, Git
Testing & Security: JUnit 5, Mockito, WireMock, Jest, Vitest, SonarQube, Snyk; Agile/Scrum; Claude Code, Codex, GitHub Copilot
Exposure: GraphQL, Next.js, Tailwind CSS, Figma

WORK EXPERIENCE

Software Engineer, Walmart Global Tech Sunnyvale, CA | 04/2025 - Present
Build Java/Spring Boot microservices for Walmart's item-ingestion platform, which moves 650M+ Apache Kafka messages a day across 82+ feed types into the catalog.

- **Java 8 to 17 migration:** led an intake service's move from Java 8 to 17, replacing deprecated APIs and core libraries for a 28% runtime gain; fixed broken tests to 90% coverage and shipped with zero downtime.
- **Java 21, Spring Boot 3.5:** upgraded the seller task-management service from Spring Boot 2.7, migrating javax to jakarta and aligning BOM dependencies; JUnit 5, Mockito and WireMock tests passed all stage gates.
- **Apache Kafka, Resilience4j:** added per-consumer circuit breakers, retries and dead-letter queues to Kafka-to-HTTP relays; open breakers apply backpressure instead of dropping messages, ending downstream lag spikes.
- **REST APIs (JAX-RS, Jersey):** maintain seller-facing feed-status and task APIs backed by Cassandra and Solr read models, serving filtered, sorted and cursor-paginated results to Seller Center.
- **CCM2 configuration migration:** consolidated legacy XML/JSON/YAML config into Walmart's central config platform across 40+ microservices, cutting config-related deployment failures by 35%.
- **Security (Snyk):** triaged Snyk findings with platform and security teams, upgraded dependencies and refactored risky components, removing 150+ high-risk vulnerabilities across services.

Software Developer, Everfit.io San Francisco, CA | 12/2020 - 03/2025
Worked across the full stack (React, Node.js, MongoDB, AWS) of a SaaS fitness-coaching platform over 3 terms: full stack intern 12/2020-05/2021, lead backend intern 05/2023-12/2023, software developer 07/2024-03/2025.

- **React, Node.js, Redis:** built a content management system (Node.js REST API + React/Ant Design Pro UI) for 6,000+ client contacts, with Redis caching its read-heavy API responses so pages render faster.
- **JWT, cross-functional delivery:** built Task Reminder endpoints, data models and JWT auth that handle 24 time zones, and worked with cross-functional teams to integrate them into the React interface.
- **AWS EC2, S3, CI/CD:** deployed Node.js API services on AWS EC2, stored client documents in S3 buckets and wired the APIs into CI/CD pipelines to keep them up between releases.
- **Node.js, Express, MongoDB:** built and tested a Leave Request REST API with Mongoose models and Joi validation, handling 500+ requests and applicant notifications and cutting processing time by 50%.

Undergraduate Researcher, Denison University Granville, OH | 05/2022 - 08/2022

- **Preference-learning algorithm:** designed a query that identifies a user's product preferences within 20 questions; $4,900 grant.

PROJECTS

Athena: AI Job Application Tracker TypeScript, Node.js, Hono, PostgreSQL, React, TypeSafe AI | 2026

- **Solo 0 to 1, human-in-the-loop AI:** an agent submits jobs, TypeSafe AI scores ATS fit, and I approve each application.
- **Self-hosted PostgreSQL 16, caching:** Docker Compose; ATS scores cached by input hash to skip repeat paid calls.

8-Bit Drift JavaScript, HTML5 Canvas 2D, GitHub Actions, GitHub Pages | 2026

- **CI/CD pipeline:** GitHub Actions runs simulation, mobile and deploy checks before each GitHub Pages publish.
- **Real-time simulation:** custom physics, collisions, drifting, gear shifting and drone flight in plain HTML5 Canvas 2D.

EDUCATION

B.A. Computer Science, Denison University Granville, OH | 05/2024
Full Stack Web Development Bootcamp, CoderSchool Ho Chi Minh City, VN | 08/2020 - 12/2020
